ROOTLINE FOUNDATION

Annual Report 2022

Every root is a promise.

Independently audited. Published in full.

The year in numbers, 2022

TREES PLANTED THIS YEAR

1,198,000

TREES IN THE GROUND BY YEAR END

7,021,500

SURVIVAL AT THREE YEARS

90%

CARBON CAPTURED TO DATE, ESTIMATED

372,000 t CO2

Where the money went

82% Planting and land care
11% Community partners
7% Operations

Flagship landscapes

LANDSCAPE	COUNTRY	SINCE	TREES (TO DATE)
Sharr Mountains	Kosovo	2019	27,214
Atlantic Forest	Brazil	2014	1,814,732
Boeny Mangroves	Madagascar	2015	1,640,601
Sebangau Peatland	Indonesia	2016	791,795
Glen Affric	Scotland	2017	345,659
Mau Forest	Kenya	2012	625,951
Kavre Terraces	Nepal	2018	274,404
Pedrógão Hills	Portugal	2018	172,031

Plus 11 community sites in 11 more countries.

Notes on method

How we count. Every tree in this report was planted, counted again after three growing seasons and found alive. Losses are replanted and the replacements counted the same way.

How it is checked. Permanent survey plots are revisited on the same date each year. An independent auditor resurveys a random sample of plots without telling us which ones in advance, and reviews our accounts line by line.

What we publish. Every site's survival rate, including the ones we are not proud of, and every failure that changed how we work.

Figures for individual landscapes are shown as trees in the ground to date, proportioned to the year of this report.
