ROOTLINE FOUNDATION

Annual Report 2024

Every root is a promise.

Independently audited. Published in full.

The year in numbers, 2024

TREES PLANTED THIS YEAR

1,342,000

TREES IN THE GROUND BY YEAR END

9,639,500

SURVIVAL AT THREE YEARS

91%

CARBON CAPTURED TO DATE, ESTIMATED

664,000 t CO2

Where the money went

82% Planting and land care
11% Community partners
7% Operations

Flagship landscapes

LANDSCAPE	COUNTRY	SINCE	TREES (TO DATE)
Sharr Mountains	Kosovo	2019	37,360
Atlantic Forest	Brazil	2014	2,491,363
Boeny Mangroves	Madagascar	2015	2,252,308
Sebangau Peatland	Indonesia	2016	1,087,019
Glen Affric	Scotland	2017	474,539
Mau Forest	Kenya	2012	859,339
Kavre Terraces	Nepal	2018	376,718
Pedrógão Hills	Portugal	2018	236,173

Plus 11 community sites in 11 more countries.

Notes on method

How we count. Every tree in this report was planted, counted again after three growing seasons and found alive. Losses are replanted and the replacements counted the same way.

How it is checked. Permanent survey plots are revisited on the same date each year. An independent auditor resurveys a random sample of plots without telling us which ones in advance, and reviews our accounts line by line.

What we publish. Every site's survival rate, including the ones we are not proud of, and every failure that changed how we work.

Figures for individual landscapes are shown as trees in the ground to date, proportioned to the year of this report.
